

# First Solar s cost per watt

### **Overview**

While First Solar witnessed record sales of over \$3.37 billion in 2012, its restructuring efforts impacted the bottom line, leading to a net loss of \$96.3 million – or \$1.11 per share – for the year. Historically, the low cost of First Solar's modules has been the key to its market performance. The use of cadmium telluride instead of silicon allowed it to achieve a significantly lower module cost (\$0.67 per watt), compared to crystalline-silicon PV, which averaged \$1.85 per watt in 2010.

On February 24, 2009, First Solar's cost per watt broke \$1 reaching \$0.98. 11.4 GW of solar modules were sold in 2023. Production costs of 18.8 Cent/Watt were forecast in February 2024, with average sales prices of 18.2 Cent/kWh for sales of around 16 GW in 2024. How much does first solar cost?

Pricing can fluctuate based on supply and demand in the solar market. First Solar's thin-film technology has historically given them a cost advantage. In 2010, First Solar's module cost was \$0.67 per watt, compared to an average of \$1.85 per watt for crystalline-silicon PV modules.

Does first solar have a cost advantage?

First Solar's thin-film technology has historically given them a cost advantage. In 2010, First Solar's module cost was \$0.67 per watt, compared to an average of \$1.85 per watt for crystalline-silicon PV modules. This cost advantage has narrowed over time as crystalline silicon technology has also improved.

Who was the first solar company?

The history of the first solar company, formerly known as Glasstech Solar, Inc., is marked by significant milestones in the solar energy development sector. Starting in the 1990s, the company evolved from its initial formation to become a leader in the photovoltaic industry.

How many solar installations does first solar have?

First Solar had installed 1,505 MW of solar capacity as of 2012. As of 2019, First Solar has over 17GW deployed globally. Below are some of First Solar's solar installations and development projects: 802 MW Copper Mountain Solar

Facility near Boulder City, NV, constructed in 5 phases for Sempra Energy and Consolidated Edison.

When did first solar go public?

The company was founded in 1990 by inventor Harold McMaster as Solar Cells, Inc. and the Florida Corporation in 1993 with JD Polk. In 1999 it was purchased by True North Partners, LLC, who rebranded it as First Solar, Inc. The company went public in 2006, trading on the NASDAQ.

Why should you choose first solar?

First Solar uses cadmium telluride (CdTe) thin-film technology, which has allowed them to achieve lower production costs compared to traditional crystalline silicon panels. As one of the largest solar manufacturers globally, First Solar benefits from economies of scale. Pricing can fluctuate based on supply and demand in the solar market.
