

# France s first energy storage power station

#### **Overview**

The idea of constructing a tidal power plant on the Rance dates to Gerard Boisnoer in 1921. The site was attractive because of the wide average-range between low and high tide levels, 8 m (26.2 ft) with a maximum perigean spring tide range of 13.5 m (44.3 ft). Overview The Rance Tidal Power Station is a station located on the of the in , France. Opened in 1966 as the world's first tidal power station, the 240- (MW) facility was.

The power station has 24. These reach total peak output at 240 MW, and produce an annual output of approximately 500 (2023: 506 GWh; 491 GWh in 2009, 523 GWh in 2010); thus the average output is ap.

An early attempt to build a tidal power plant was made at in the in 1925, but due to insufficient finance, it was abandoned in 1930. Plans for this plant served as the draft for follow-on work. Use of tidal ener.

In spite of the high development cost of the project, the costs have now been recovered, and electricity production costs are lower than that of generation (1.8 ¢/kWh versus 2.5 ¢/kWh for nuclear). H.
