

# French communication base station wind power and photovoltaic power generation energy saving

#### **Overview**

What percentage of French electricity comes from wind and solar?

As a result of the development of renewable energy in 2023, wind and solar installations represented 14.6% of the French electricity mix. Wind power became the third-largest generator, behind nuclear and hydro power but ahead of gas.

What is France's energy mix?

The graph represents the evolution of France's energy mix, with an annual and monthly view of electricity generation in France, overall and by technology. The French energy mix is essentially made up of nuclear, hydroelectric and fossil-fired power plants, as well as renewable energies (wind power, photovoltaic solar power, biomass).

What type of power does France have?

France's installed electricity generation capacity is mainly made up of nuclear, hydroelectric and fossil-fired power plants, as well as renewable power plants (wind, solar photovoltaic, biomass). French power production continues to change in 2022 and 2023, driven by the growth in renewable energy sources.

How much energy does France produce in 2023?

On the other hand, 2023 has seen a peak in the production figures for both wind power (50.8 TWh, i.e. 10.3% of the electricity mix) and solar power (21.6 TWh, i.e. 4.4% of the electricity mix). As a result of the development of renewable energy in 2023, wind and solar installations represented 14.6% of the French electricity mix.

What is the French solar Pact?

In April 2024, the French government launched the Solar Pact to support the development of the French photovoltaic industry by mobilizing public procurement, reinforcing carbon criteria, committing renewable energy

developers to using more French panels, and making commitments for agrivoltaics and small-scale installations.

What information do I need to apply for electricity in France?

Article R. 333-1 of the French Energy Code lists information that the applicant must provide the administration with, including demonstration of its technical, financial and economic capacity to supply electricity.
