

French energy storage power station vanadium battery

Overview

What is the largest energy storage plant based on vanadium flow batteries?

The battery installation, which received funding from the SOLBAL photovoltaic investment aid programme, managed by IDAE, has a power of 1.1 MW and a storage capacity of 5.5 MWh, making it the largest energy storage plant based on vanadium flow batteries in Europe.

What is a vanadium flow battery?

"Vanadium flow batteries store electricity electrochemically, like lithium batteries, but using a different configuration and elements different from lithium, in this case vanadium," explain experts from Endesa's renewable subsidiary, Enel Green Power Spain, from the Innovation area.

How long does a vanadium flow battery last?

Vanadium flow batteries "have by far the longest lifetimes" of all batteries and are able to perform over 20,000 charge-and-discharge cycles—equivalent to operating for 15-25 years—with minimal performance decline, said Hope Wikoff, an analyst with the US National Renewable Energy Laboratory.

How big is France's energy storage capacity?

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. France had 90MW of capacity in 2022 and this is expected to rise to 359MW by 2030. Listed below are the five largest energy storage projects by capacity in France, according to GlobalData's power database.
