

# French solar grid-connected system

### **Overview**

France is aiming to increase its solar PV capacity from 11.5 GW in March 2021 to 23 GW by the end of 2023. The country offers for small-scale solar PV up to 100 kWp on rooftops for self-consumption, with a specific grid tariff for collective users and exemption from the domestic tax on electricity for projects under 1 MW. However, a proposal to reduce solar PV subsidies for ongoing projects until 2030 has created controversy, affecting the sector's growth.

### French solar grid-connected system

### **French National Grid status**

Italian exports: Italy has a deficit of power and relies on French nuclear power to enable it to function alongside its predominantly gas powered grid, with some ...
