

Guatemala uses outdoor power

Overview

Guatemala aims to achieve 60% of its total electricity generation from renewables by 2020, while on the long term 80% of the total electricity generation.

How much electricity does Guatemala have?

As of 2020, Guatemala had 4110 MW of installed electrical capacity, based primarily on hydro power (38.38%), fossil fuels (30.36%), and biomass (25.20%). Other renewable sources represented a much smaller percentage of capacity, including wind (2.61%), solar (2.25%) and geothermal energy (1.20%).

What is Guatemala's energy source?

This page is part of Global Energy Monitor 's Latin America Energy Portal. In 2018, Guatemala derived 57.43% of its total energy supply from biofuels and waste, followed by oil (29.54%), coal (7.68%), hydro (3.22%), and other renewables such as wind and solar (2.12%).

Can geothermal power be used in Guatemala?

The Guatemalan government has a plan of using geothermal power to supply for two thirds of the country's energy needs by 2022. Thus reducing oil imports and stabilizing the country's energy supply. Crude oil production in Guatemala has high potential, with estimations suggesting the possibility of reaching 50000 barrels/day.

Can Guatemala meet 100% of its energy needs?

Like many Central American countries, Guatemala has the potential to meet 100% of its energy needs through renewable energy resources.

Is wind energy a good investment in Guatemala?

There is also strong interest by the government in wind projects. Wind energy is not nearly as attractive of an investment in Guatemala as other forms of renewable energy are such as solar and geothermal energy. There are only a

few areas in Guatemala where wind development would be worthwhile.

What green energy technologies will Guatemala be able to use?

There are several key green energy technologies that are integral to Guatemala's future as a green energy consumer and cite for future short term and long term investments; solar, hydroelectric, wind, and geothermal.
