

Guyana Telecommunication Base Station Wind Power Contractor

Overview

How many wind towers will be installed in Guyana?

Over the next six months the Hinterland Electrification Company will be installing three (3) more wind towers to facilitate the agenda of instituting renewable energy sources along the coast of Guyana. (Adopted from the Ministry of Public Infrastructure Facebook page.).

What is the importance of a wind tower in Guyana?

The importance of this wind tower is to yield quality wind data, which can be used by wind project investors to develop wind farms in Guyana along its coast. The Ministry of Public Infrastructure recognizes that high quality wind measurement is an essential ingredient in determining the feasibility of the wind project.

Is hydropower a good alternative to solar energy in Guyana?

Hydro will also provide, in the long-term, a cheaper solution than any other technology, due to its long lifespan. In Guyana, solar energy, wind and hydropower are good complementary resources. Solar energy is available during daylight hours, peaking at noon, while wind is stronger during evening hours and at nights.

Can hydropower provide Guyana with utility-scale and small-scale capacity?

Hydropower has the potential to provide Guyana with both utility-scale and small-scale capacity. Small-scale is discussed under "Isolated Grids" below. Guyana has a potential for 8.5 Gigawatt (GW) of hydropower on 33 hydropower plants (including storage capacity and run-of-river).

What is a small-scale hydropower project in Guyana?

Small-scale is discussed under "Isolated Grids" below. Guyana has a potential for 8.5 Gigawatt (GW) of hydropower on 33 hydropower plants (including storage capacity and run-of-river). It is anticipated that Guyana will build two

hydro plants over the next 20 years: Amaila Falls and another which is still to be identified.

What resources are available in Guyana?

In Guyana, solar energy, wind and hydropower are good complementary resources. Solar energy is available during daylight hours, peaking at noon, while wind is stronger during evening hours and at nights. Wind is lower during the wet seasons, while hydropower is fully available.
