

# High energy density lithium-ion energy storage battery

### **Overview**

Which lithium ion battery has the highest energy density?

At present, the publicly reported highest energy density of lithium-ion batteries (lithium-ion batteries in the traditional sense) based on embedded reactive positive materials is the anode-free soft-pack battery developed by Professor Jeff Dahn's research team (575 Wh kg -1, 1414 Wh L -1).

What is a high-density lithium-ion battery?

A high-density lithium-ion battery stores more energy in a smaller or lighter form than a regular lithium-ion battery. This directly affects how long a device runs before recharging and how heavy or bulky the battery is. There are two main types of energy density: Volumetric Energy Density: The energy stored per unit volume (Wh/L).

Are lithium-ion batteries a good energy storage system?

Lithium-ion batteries (LIBs) have long been considered as an efficient energy storage system on the basis of their energy density, power density, reliability, and stability, which have occupied an irreplaceable position in the study of many fields over the past decades.

Why do we need high energy density lithium batteries?

Furthermore, the development of high energy density lithium batteries can improve the balanced supply of intermittent, fluctuating, and uncertain renewable clean energy such as tidal energy, solar energy, and wind energy.

How can high-energy-density lithium batteries be designed?

Noticeably, there are two critical trends that can be drawn toward the design of high-energy-density lithium batteries. First, lithium-rich layered oxides (LLOs) will play a central role as cathode materials in boosting the energy density of lithium batteries.

How to achieve high energy density batteries?

In order to achieve high energy density batteries, researchers have tried to develop electrode materials with higher energy density or modify existing electrode materials, improve the design of lithium batteries and develop new electrochemical energy systems, such as lithium air, lithium sulfur batteries, etc.
