

Home energy storage systems installed in the United States

Overview

What's going on with residential energy storage?

Residential energy storage installations just hit an all-time high, and US gridscale energy storage is coming on fierce. With a record-breaking 346 MW of residential storage built in Q3 2024 — a 63% increase over the previous quarter — the residential energy storage market has reached an all-time high.

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

Which energy storage technologies are used in the United States?

Batteries and pumped hydro are the main storage technologies in use in the U.S., according to the number of storage projects in the country in 2023. Discover all statistics and data on Energy storage in the U.S. now on statista.com!.

Can energy storage be used in small nonresidential systems?

While this paper focuses on residential energy storage, some of the same ESSs may be used in small nonresidential systems. Nonresidential installations include installations at industrial sites, commercial buildings, nonprofits, government buildings, and similar locations, and do not include utility installations.

Which states have installed utility-scale storage in the United States?

The installation of utility-scale storage in the United States has primarily been concentrated in California and Texas due to supportive state policies and

significant solar and wind capacity that the storage resources will support. By Q3 2024, Texas had installed 2,283 MWh of storage capacity, while California had installed 5,992 MWh of capacity.

What are the different types of energy storage policies?

Approximately 17 states have adopted some form of energy storage policies, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.
