

# How big should I choose for a photovoltaic inverter

#### **Overview**

Your inverter should match your solar and battery needs. A properly sized inverter ensures efficient charging, discharging, and home power supply. Most UK homes need at least a 5 kW inverter. While 3.68 kW is common, larger homes or those with batteries benefit from a 5 kW+ system. How do I choose the right solar inverter size?

When it comes to solar inverter sizing, installers will consider three primary factors: the size of your solar array, geography, and site-specific conditions. The size of your solar array is the most important factor in determining the appropriate size for your solar inverter.

What is solar inverter sizing?

Solar inverter sizing refers to choosing an inverter with the appropriate AC output for your solar panel system's DC input. It's about matching capacity and performance, without wasting energy or breaching local export limits. Inverter size is measured in kilowatts (kW). It should match your solar array within a 1.15 to 1.33 ratio.

What size inverter do I Need?

Inverters come in different sizes starting from as little as 125 watts. The typical inverter sizes used for residential and commercial applications are between 1 and 10kW with 3 and 5kW sizes being the most common. With such an array of options, how do you find the right size for you?

An inverter works best when close to its capacity.

How much power does a solar inverter need?

Combine your findings: Highest Surge: e.g., 600 W from fridge. → Recommended Inverter Size: 1,200 W minimum. If you later add an air conditioner (2,400 W surge), you'd bump up to a 3,000 W inverter—like the Lefor 3000W in the Lefor Solar Inverter Series.

#### Can a solar inverter be bigger than the DC rating?

The size of your solar inverter can be larger or smaller than the DC rating of your solar array, to a certain extent. The array-to-inverter ratio of a solar panel system is the DC rating of your solar array divided by the maximum AC output of your inverter. For example, if your array is 6 kW with a 6000 W inverter, the array-to-inverter ratio is 1.

Why is sizing a solar inverter important?

It's an essential part of any home battery or solar installation. Sizing your inverter correctly ensures that no electricity is wasted and maximum efficiency is achieved. Undersized inverters waste energy and wear out faster. If your inverter is too small, excess solar power is lost, and the unit degrades more quickly.

### How big should I choose for a photovoltaic inverter

#### Size your solar system

Talk to your solar retailer or installer about the inverter specifications for inverter to panel size requirements. If the system size (total rated solar panel output) is more than the inverter ...
