

# **How long is the warranty period for Polish energy storage batteries**

## Overview

---

This means the warranty is valid until the battery stores and delivers 20 MWh (or 20,000 kilowatt-hours (kWh)) of energy. Like cycles clauses, throughput warranties typically only apply if your battery delivers a set amount of energy before its warranty period (i.e., 10 years) is up. How long does a battery warranty last?

A standard battery warranty should come with at least 10 years of protection, though it can be shorter depending on how often you charge and drain your battery. Battery warranties typically won't reimburse for labor costs associated with installing new equipment or shipping fees for new equipment.

Does a battery storage system need a warranty?

A battery storage system is a decades-long investment that a warranty can help protect. The less power your system stores, the more your home may need to draw from the utility company, which eats into your savings. A good warranty ensures that if your battery experiences a problem, that it will be replaced and your investment will be protected.

Does a battery Installer have a warranty?

Most battery manufacturers leave workmanship (labor) warranties to the installer. When applicable, it's typically only an option if you work with specific installers in a

manufacturer's certified network.

Does a full charge in Year 8 mean a longer warranty?

A full charge in year eight won't return the same output as a full charge in year one. As with any battery-powered electronic device, cycling your battery will diminish its output as the years go on. A greater cycle allowance doesn't necessarily mean a longer warranty term.
