

# How many billions of yuan does the energy storage project generate annually

#### **Overview**

The annual revenue generated by energy storage projects, assessed at around 20 billion yuan, underlines the substantial economic impact of this sector. How much money has China invested in energy storage projects?

In terms of investment scale, the newly operated new energy storage projects have driven direct investment of more than 30 billion yuan (\$4.2 billion) based on the current market price, said Liu Yafang, an official with the administration, during a conference held in Beijing on Monday.

How many kilowatts are in China's new energy storage projects?

[Photo/China Daily] The installed capacity of new energy storage projects that were put into operation during the first half of this year in China has reached 8.63 million kilowatts, equivalent to the total installed capacity of previous years in the country, according to the National Energy Administration (NEA).

Will China reach 30gw of energy storage by 2025?

The deployment of "new type" energy storage capacity almost quadrupled in 2023 in China, increasing to 31.4GW, up from just 8.7GW in 2022, according to data from the National Energy Administration (NEA). This means that China surpassed its target of reaching 30GW of the "new type" energy storage by 2025 two years earlier than planned.

How has China impacted the energy sector?

In this Q&A, Carbon Brief explores how China has been driving the sector forwards and how it fits into the nation's wider energy transition. China is currently the world's largest market for energy storage, followed by the US and Europe, according to BloombergNEF.

Will China's new energy storage sector grow in 2024?

BEIJING, Jan. 24 (Xinhua) -- China's new energy storage sector has seen a rapid growth in 2024, with installed capacity surpassing 70 million kilowatts,

said an official with the National Energy Administration (NEA).

Why is energy storage accelerating in China?

With the rapid growth of the installed scale of renewable energy, the power system's demand for various regulatory resources has been growing, leading to accelerating development of new energy storage in the country in recent years, said Liu.
