

# How much does a BMS lithium battery cost

#### **Overview**

Why do lithium ion batteries need a BMS?

Lithium-ion cells are more sensitive to overcharge and undercharge conditions than many other battery chemistries. The BMS monitors the charge and discharge of the battery to ensure the battery operates safely.

How much does a battery management system cost?

Active BMS also enables low-voltage charging restart once cells recover to safe zones. With enhanced capabilities over passive BMS, they suit medium-large battery capacities. Average active BMS price range: \$500-\$2,000. Hybrid BMS – As the name implies, hybrid BMS combines elements of both passive and active systems.

How much does a battery storage system cost?

The cost of the BMS can account for about 5% to 10% of the total battery storage system cost. For a 2MW system, if we assume a BMS cost ratio of 8%, and the total system cost excluding the BMS is \$800,000 (as calculated for the battery cost above), then the cost of the BMS would be \$800,000 \* 0.08 = \$64,000.

How much does a hybrid battery management system cost?

With almost full capabilities at partial costs, hybrid BMS presents excellent middle-ground options for many lithium battery applications. Average hybrid BMS price range: \$800-\$1,500. Capabilities and pricing can vary widely for BMS. Here are 6 of the leading global manufacturers serving both consumer and industrial lithium battery markets:.

How much does a BMS cost?

Average active BMS price range: \$500-\$2,000. Hybrid BMS – As the name implies, hybrid BMS combines elements of both passive and active systems. This allows optimized functionality per cell at lower costs than purely active

BMS. Hybrid systems actively balance while monitoring voltages, while allowing passive shunting on cell voltage thresholds.

What is a battery management system (BMS)?

The Battery Management System or BMS is responsible for keeping these cells working in unison so that they are charged and discharged correctly. Lithiumion cells are more sensitive to overcharge and undercharge conditions than many other battery chemistries.
