

Huawei Niue energy storage battery use

Overview

Does Huawei have a sulfide battery?

Huawei Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times higher than today's typical electric vehicle batteries.

Is Huawei a good battery company?

If these claims are accurate, Huawei would have a huge advantage in energy density and charging speed compared to other automakers and tech companies that are researching solid-state batteries. Assuming everything shakes out, SynergyFiles.com points out this could spell trouble for rival companies.

Why is Huawei pursuing solid-state battery development?

By pursuing solid-state battery development, Huawei joins a growing list of global automakers and tech companies such as BMW, Mercedes-Benz, Volkswagen, and BYD, all racing to unlock safer, lighter, and faster-charging batteries to transform the future of electric mobility.

How many miles can a Huawei battery charge?

Huawei promises that its battery technology could deliver around 1,864 miles of range and achieve a 10% to 80% charge in under five minutes.

How long will Huawei's battery last?

The battery is also expected to provide 1,860 miles (3,000 km) of range in a midsize sedan, 1,860 miles, an almost unbelievable figure. And if all that isn't enough, Huawei's is also targeting a recharge time of just 5 minutes, a staggering speed. This development could be an absolute electric vehicle game-changer.

Does Huawei use sulfide electrolytes?

Huawei's patent application reveals that its battery uses a method of doping sulfide electrolytes with nitrogen to reduce side reactions at the lithium interface. However, beyond this detail, the company is keeping most of its technology under wraps as competition intensifies to safely mass-produce solid-state batteries.
