

# Huawei s bifacial solar panels

### **Overview**

What makes Huawei fusion Solar Smart PV solution bifacial inverter unique?

Secure and reliable protection design is another key attribute of the next-gen bifacial inverter. "Every two strings of the Huawei FusionSolar Smart PV Solution string inverter form one MPPT circuit and have a fuseless security protection solution. The design ensures that no risk will occur at overcurrent condition," says Gu.

What are bifacial solar panels?

Bifacial solar panels: What. Bifacial solar panels are known to increase electricity generation by up to 27%. The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel.

What is Huawei fusionsolar smart PV solution?

Huawei Technologies' FusionSolar Smart PV Solution has refined inverter technology to address these issues, while providing substantial increases in bifacial system yields in the process.

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

What does Huawei do with solar energy?

The company says its goal is to innovate and optimize PV throughout its entire life cycle of energy generation. To do this, Huawei integrates cutting-edge digitalized inverter technol-ogy ofering smart solutions for custom-ers to

achieve faster solar payback periods with higher yields and lower maintenance costs, according to Subramanian.

Are bifacial solar panels a good investment?

And, as we'll discuss, bifacial panels are also more expensive than traditional single-face panels, which can affect the breakeven point of your investment. Bifacial solar panels can capture light energy on both sides of the panel, whereas monofacial panels (AKA traditional solar panels) only absorb sunlight on the front.
