

# Indonesia Communication Base Station Photovoltaic Power Generation Project

#### **Overview**

What are Indonesia's floating solar PV potentials?

One of the realizations of Indonesia's floating solar PV potentials is the Cirata Reservoir in West Java, which has just been inaugurated at the end of 2023. Hosting Southeast Asia's largest floating PV installation, the Cirata Floating PV Installation covers 225 hectares of water, boasting a capacity of 192 MW.

How many floating PV installations are being planned in Indonesia?

A further 60 floating PV installations, taking Cirata as the blueprint, are being planned in Indonesia, as the country seeks to tap the potential of its 100 reservoirs and 521 lakes. ABB worked with on-site engineers to install, test and commission medium-voltage switchgear during Phase 1 of the project.

Will China win a photovoltaic power station project in Indonesia?

This is the first overseas photovoltaic power station project of CHN Energy, and it is also the first time that a Chinese-funded enterprise has won the bid for a centralized photovoltaic IPP (independent power generation company) project in Indonesia.

Why did the Indonesian government change PLN's solar PV installation limit?

In early 2024, the Indonesian government amended the Energy and Mineral Resources Ministerial Regulation No. 26/2021 to boost the household sector transition to renewable energy, eliminating the previous solar PV installation limit of 10-15% out of the total electricity capacity installed by PLN.

Does Indonesia need alternative energy sources?

Traditionally, the country has relied on fossil fuels, particularly coal, oil, and natural gas, to power its economy. However, the need to reduce greenhouse gas emissions, improve energy security, and meet the goals outlined in the Paris Agreement has led Indonesia to explore alternative, renewable energy sources.

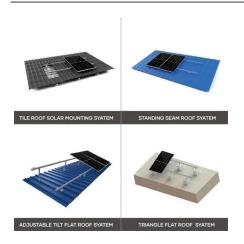

Where can wind power be generated in Indonesia?

Wind energy has significant potential in certain regions of the country, particularly in East Nusa Tenggara, South Sulawesi, and West Java. Wind speeds in these areas range between 5 to 6 meters per second, which is suitable for commercial wind power generation (Global Wind Energy Council, 2022).
