

## Indonesia Energy Storage Container Industry and Commerce

#### **Overview**

What is Indonesia's first & largest containerized battery energy storage system?

Indonesia's First & Largest Containerized Battery Energy Storage System. Offgrid solar energy system at PT Cipta Kridatama equipped with CBESS. The CBESS solar energy system at PT Cipta Kridatama Jambi operates off-grid, making it a reliable, self-sustaining energy source without dependence on the national electricity grid.

Why is battery energy storage system important in Indonesia?

However, given the challenge of Indonesia's geological landscape, with many off-grid and remote areas, there is growing intermittency issue that hamper the development of solar and wind generation. Hence, the battery energy storage system (BESS) technologies have a critical role in the development of Indonesia's renewable energy.

Can solar energy drive business sustainability in Indonesia's mining sector?

With a strong track record in solar energy system development, SUN Energy continues to provide cutting-edge solutions for industrial energy needs. The collaboration with PT Cipta Kridatama demonstrates how green energy adoption can drive both operational efficiency and long-term business sustainability in Indonesia's mining sector.

Why do Indonesians need energy storage?

Indonesia's focus on industrial growth creates a demand for reliable power. BESS can offer backup power, improve power quality, and enable cost savings through peak shaving. The Indonesian government recognizes the importance of energy storage.

Does Indonesia need solar & wind energy storage?

Although, there is no policy mandating the installation of energy storage in

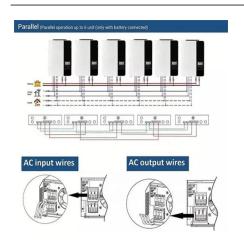

solar or wind projects in Indonesia, the abundance of solar and wind resources in Indonesia's archipelago and increased potential demand across industries indicate that BESS demand is poised to grow substantially in the near future.

Does Indonesia have a potential for carbon storage?

The study highlighted Indonesia's significant potential for carbon storage, with estimated capacities of 5 Gt, 0.3 Gt, and 275 Gt of CO 2 storage in gas fields, oil fields, and aquifers, respectively. Bokka and Lau investigated the potential for CCS initiatives in the Borneo region.
