

Indonesia Energy Storage Power Station Investment Plan

Overview

Will Indonesia build a 100 GW solar power plant?

Jakarta, August 7, 2025 - Indonesia will build a 100 Gigawatt (GW) Solar Power Plant (PLTS). The program plans to build 80 GW of solar power plants and 320 GWh of Battery Energy Storage System (BESS) to be managed by the Merah Putih Village Cooperative (KDMP) in 80,000 villages, and 20 GW of Centralized solar power plants.

Will Indonesia increase its power capacity by 71gw?

Credit: FarisFitrianto/Shutterstock. Indonesia plans to increase its power capacity by 71GW up to 2034 with a significant focus on private investment. The government, together with PT PLN (Persero), will prioritise the development of transmission lines to support renewable energy generation, according to Energy Minister Bahlil Lahadalia.

What is Indonesia's energy storage capacity?

Indonesia's total cumulative installed energy storage capacity has reached around 35 MWh by mid-2024, primarily from BESS installations in distributed, isolated systems supporting solar PV generation. Installed energy storage capacity could exceed 30 GWh by 2030, based on announced projects.

How big is Indonesia's solar energy potential?

Despite the vast potential of solar energy power generation across Indonesia, the scale of the sector has been mostly untapped, with approximately 150 MW of solar capacity installed by end 2019. Solar has an estimated potential of more than 200 GW (footnote 17).

How much power does Indonesia have?

According to the report, Indonesia currently has an installed power capacity of 101GW, with 75GW managed by PLN. Renewables comprise 15% of the energy mix, while coal dominates more than half. Indonesian officials indicate

that 70% of the new power plants will utilise renewable energy, potentially including nuclear and hydrogen sources.

How many power plants will be built in Indonesia?

The plan includes 48,000km of circuit transmission lines, equivalent to 8,000km in a straight line. The lines will support 60% of the new power plants to be developed by the private sector. The announcement was made during the launch of 26 power plants that recently began operations across Indonesia.
