

Introduction to Belarusian wind solar and energy storage

Overview

How many solar energy installations are there in Belarus?

287 solar heating installations with total heat capacity of 3.9 MW th. Hydropower resources in Belarus are deemed scarce, though there are opportunities for small hydro in the northern and central parts of the country.

Is Belarus a energy import-dependent country?

Energy imports amount to 84.8% of the total primary energy supply and come primarily from a single source supplier, leaving Belarus as one of the world's most energy import-dependent countries in the world. Increasing deployment of renewable energy technologies would support Belarus' domestic energy supply.

What energy resources does Belarus have?

Belarus does not have significant local energy resources, apart from renewables. Fossil fuels currently make up more than 90% of the energy mix in Belarus, with natural gas taking the lion's share. Power generation is also predominantly fossil fuel-based, with very limited integration of renewable sources.

Is Belarus energy based on fossil fuels?

Power generation is also predominantly fossil fuel-based, with very limited integration of renewable sources. Energy imports amount to 84.8% of the total primary energy supply and come primarily from a single source supplier, leaving Belarus as one of the world's most energy import-dependent countries in the world.

What is the solar power potential of Belarus?

Solar power potential is significant, mainly in the south and southeast of the country. In terms of global horizontal irradiation (GHI) and direct normal irradiation (DNI), most of Belarus receives only 1 100 kilowatt hours per

square metre (kWh/m 2) to 1 400 kWh/m 2 of GHI, and around 1 000 kWh/m 2 of DNI.

What technology is used in Belarus?

The technology with the most mature local market is biomass, currently used mainly in heat generation. Belarus is still in the early stages of deploying wind, solar PV and biogas, although the technologies used in their development are considered mature and meet international standards.

Introduction to Belarusian wind solar and energy storage

3. Green Energy

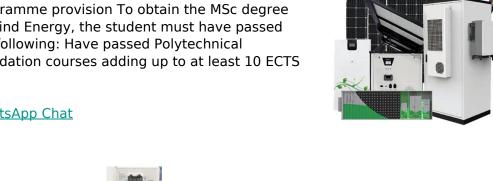

Solar and wind energy generation made up 3.45% in 2020, with an additional 4% from biofuels, primarily wood. Belarus ranks among the top twenty most energy-dependent countries
