

Introduction to Mobile Energy Storage Charging Pile

Overview

What is the energy storage charging pile system for EV?

The new energy storage charging pile system for EV is mainly composed of two parts: a power regulation system and a charge and discharge control system. The power regulation system is the energy transmission link between the power grid, the energy storage battery pack, and the battery pack of the EV.

What is energy storage charging pile management system?

System Architecture Design Based on the Internet of Things technology, the energy storage charging pile management system is designed as a three-layer structure, and its system architecture is shown in Figure 9. The perception layer is energy storage charging pile equipment.

How do I control the energy storage charging pile device?

The user can control the energy storage charging pile device through the mobile terminal and the Web client, and the instructions are sent to the energy storage charging pile device via the NB network. The cloud server provides services for three types of clients.

Can energy storage battery be added on a traditional charging pile?

For Android system, energy storage charging pile equipment adopts S5P4418 solution in hardware which manufactured by Shenzhen Youjian Hengtian Technology Co., Ltd., Shenzhen, China. In this paper, a high-performance energy storage battery is added on the basis of the traditional charging pile.

How much power does a mobile charging pile use?

The power of mobile charging piles that we have developed is 7 kW so far. And there is energy loss when using mobile charging. The electricity cost of mobile charging pile for consumers is set as 1.5 yuan/kWh, and users should pay an additional 35-yuan service fee for pile delivery each time. The charging

stations in the market vary a lot in size.

What are the assumptions used in a mobile charging pile?

Following assumptions are used in this work: 1. A user always goes to the nearest charging station; 2. The charging station always has a free slot for the EV, and a charging pile is available at any time; 3. The electricity charged into an EV is 30 kWh in the station. 2.1.2. Convenience model of mobile charging piles
