

# Investment value of energy storage cabinet batteries

#### **Overview**

What are the economics of battery energy storage?

The Economics of Battery Energy Storage, a recent RMI analysis, showed that battery storage systems can provide up to thirteen distinct electricity services to the grid. However, some of these services are hindered by regulatory barriers and cannot compete directly with conventional investments in wires and generators.

Is battery storage a good investment?

The economics of battery storage is a complex and evolving field. The declining costs, combined with the potential for significant savings and favorable ROI, make battery storage an increasingly attractive option.

Are battery storage projects financially viable?

Different countries have various schemes, like feed-in tariffs or grants, which can significantly impact the financial viability of battery storage projects. Market trends indicate a continuing decrease in the cost of battery storage, making it an increasingly viable option for both grid and off-grid applications.

How do government incentives and subsidies affect battery storage?

Government incentives and subsidies play a significant role in the economics of battery storage. In the United States, the investment tax credit (ITC), which offers a tax credit for solar energy systems, has been extended to include battery storage when installed in conjunction with solar panels.

Why is battery storage important?

The global shift towards renewable energy sources has spotlighted the critical role of battery storage systems. These systems are essential for managing the intermittency of renewable sources like solar and wind. Understanding the economics of battery storage is vital for investors, policymakers, and consumers alike.

How has the cost of battery storage changed over the past decade?

The cost of battery storage systems has been declining significantly over the past decade. By the beginning of 2023 the price of lithium-ion batteries, which are widely used in energy storage, had fallen by about 89% since 2010.
