

# Is outdoor power supply classified as electrical

#### **Overview**

Many of the rules applying to outdoor receptacle outlets are aimed at reducing the likelihood of shock, which is a notable risk anytime a user is in direct contact with the earth. The principal rules for outdoor rec.

What is an external power supply?

Sign up for email updates on regulations for this and other products As defined in the Code of Federal Regulations (CFR), "external power supply" means an external power supply circuit that is used to convert household electric current into DC current or lower-voltage AC current to operate a consumer product.

What is the National Electrical Code (NEC) for outdoor wiring?

The National Electrical Code (NEC) includes many specific requirements for installation of outdoor circuits and equipment. With outdoor wiring, the primary safety concerns involve shielding against moisture and corrosion, preventing physical damage, and managing issues related to underground burial.

How does a power supply protect the ground?

Power supplies fall into one of three protection classes, based on the need (or not) for a protective earth connection known as 'earthing'. This works by providing a path for a faulty electrical current to flow to the ground, shielding users from shocks when equipment insulation fails.

What is outdoor wiring code compliance?

The National Electrical Code (NEC) outlines specific rules for outdoor wiring. These regulations ensure safety and efficiency in all outdoor electrical installations. Covers and boxes play a crucial role in outdoor wiring code compliance. These components protect electrical connections from moisture and debris.

Does a power supply need a safety ground conductor?

Protection is maintained by double or reinforced insulation, rather than relying on both protective earthing and basic insulation. In this way, IEC Class II power supplies are not mandated to have a safety ground conductor brought to the power supply.

What is a Class II external power supply?

The use of a Class II external power supply is straightforward, with the main difference compared to a Class I product being that it requires only 2-core main leads for secure operation. Protection is maintained by double or reinforced insulation, rather than relying on both protective earthing and basic insulation.
