#### **Overview**

Why should you lease a site for a battery energy storage system?

Land is the most important resource for the development of battery energy storage systems. Several factors must be considered when considering the leasing of a site for a BESS project, some of the most important being: The size of the land required for a BESS project depends on the capacity of the battery system.

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are rapidly emerging as a critical component of the renewable energy landscape. As the demand for clean and reliable energy grows, BESS plays a crucial role in ensuring grid stability and optimizing energy utilization. Land requirements are a significant factor in the development of BESS projects.

Can a solar farm be a storage project?

In addition, while solar farms are only located in rural areas, a storage project could be in an urban area, where parcels are smaller and substations are more numerous. A storage project could even be built on an existing foundation, such as a vacant parking lot. How do I know if my land qualifies for a BESS?

How do utilities encourage energy storage?

Utilities often offer incentives to encourage the adoption of energy storage systems to improve grid reliability and balance supply and demand. These incentives may include demand response programs, time-of-use rate structures, or capacity market participation.
