

Large-scale energy storage in the Middle East

Overview

Is large-scale energy storage a viable option in the Middle East?

Until recently, large-scale energy storage was barely a consideration in the Middle East, where fossil fuels have long dominated power generation. With renewable energy projects expanding across the region, energy storage has started gaining traction.

Is energy storage gaining traction in the Middle East?

With renewable energy projects expanding across the region, energy storage has started gaining traction. Unlike Europe, North America, and Asia, where renewable energy and storage technologies are well-established, the Middle East remains in the early stages of development.

Which energy storage technology has the most installed capacity in MENA?

Pumped hydro storage (PHS) has the largest share of installed capacity in MENA at 55%, as compared to a global share of 90%. Pumped hydro storage is one of the oldest energy storage technologies, which explains its dominance in the global ESS market.

Which energy storage solutions will be the leading energy storage solution in MENA?

Electrochemical storage (batteries) will be the leading energy storage solution in MENA in the short to medium terms, led by sodium-sulfur (NaS) and lithiumion (Li-lon) batteries.

Will energy storage expand in MENA?

The current utility business model limits the prospects of energy storage expansion opportunities, unless driven by direct governmental support. Auctions in MENA have been a major driver for renewable energy deployment, most notably for solar and wind, but only a few have included energy storage.

What is energy storage system deployment in MENA?

Energy Storage System deployment in MENA Energy Storage Systems (ESS) play a critical role in the integration of VRE into the power grid, as these systems manage the intermittencies of renewable energy resources and mitigate potential power supply disruptions.

Large-scale energy storage in the Middle East

Middle East Lithium-ion Battery Market Size Report, 2033

The key factors driving the Middle East lithiumion battery market include the region's accelerating adoption of electric vehicles, largescale integration of renewable energy, ...
