

## Lebanon Power Grid Energy Storage Frequency Regulation Project

#### **Overview**

Why does Lebanon need a power grid?

This requirement is mainly to protect the grid's infrastructure and for the safety of personnel who might be working during power cuts. The islanding effect is prominent in Lebanon, given the high frequency of power outages, which leads to an economic challenge due to wasted energy (in the absence of storage).

Does Lebanon rely on distributed power generation?

In Lebanon, there is already some reliance on distributed power generation due to the wide use of diesel generators that cover the deficit between supply and demand.

Why do generator networks exist in Lebanon?

The answer to the question of why generator networks exist lies in the failings of the governance of the wider energy sector in Lebanon, particularly in dealing with EDL and its persistent challenges.

How have diesel generators improved Lebanon's energy security?

In this regard, diesel generators have enhanced Lebanon's energy security by allowing the country to continue to function when its power infrastructure was targeted (this is discussed in greater detail below).

How much electricity is produced by diesel generators in Lebanon?

As for the commercial operations, as discussed above, they contribute almost 50% of the total electricity produced by diesel generators in Lebanon. In terms of capacity, this translates into around 870 MVA.

Are distributed solar PV systems a viable option for Lebanon?

Distributed solar PV systems offer Lebanon serious benefits. From EDL's

perspective, they can lower (or defer) investments in grid upgrades and reduce the need for installing expensive peaking capacity. From consumers' perspective, substantial cost savings could be achieved. However, the magnitude of these cost
