

# Lithium battery energy storage cabinet installation requirements and standards

### **Overview**

AS/NZS 5139:2019 was published on the 11 October 2019 and sets out general installation and safety requirements for battery energy storage systems. What are the requirements for a Bess energy storage system?

For a Lithium-ion Battery Energy Storage System (BESS), the components must comply with all codes and standards relevant to the operation and installation of energy storage equipment. All installed equipment must be tested and approved by Underwriters Laboratories (UL) or another nationally recognized testing facility.

Can a lithium energy storage system be used in an occupied facility?

[C] 4-8.2 UFC 3-520-01 prohibits the use of any type of lithium energy storage system in an occupied facility. This UFC technical section does not exempt the use prohibition in UFC 3-520-01.

What is a safety standard for stationary batteries?

Safety standard for stationary batteries for energy storage applications, nonchemistry specific and includes electrochemical capacitor systems or hybrid electrochemical capacitor and battery systems. Includes requirements for unique technologies such as flow batteries and sodium beta (i.e., sodium sulfur and sodium nickel chloride).

How far should a lithium battery be from an occupied structure?

Unoccupied Structures housing lithium battery must be located no closer than 100 feet (30 m) to an occupied structure or an identified outdoor use area. A perimeter fence or wall in accordance with the installation's facility standards must be provided not less than 100 feet from the structure.

What are the requirements for Bess-Li cabinets & open battery racks?

Sturdy construction with impact resistance equivalent to reinforced concrete or concrete masonry units (CMU) is required. The BESS-Li cabinets or open

battery racks must be separated from other BESS-Li cabinets or open battery racks by a minimum of 3 feet (1 m) or by partitions extending from floor to ceiling/roof/floor above.

What are the requirements for fire protection of energy storage systems?

The standard offers comprehensive criteria for the fire protection of energy storage system (ESS) installations based on the technology used, the setting where the technology is being installed, the size and separation of ESS installations, and the fire suppression and control systems in place.
