

Lithium battery pack life cycle

Overview

Lithium-ion batteries usually last 2 to 4 years or 600 to 1,000 charge cycles before their performance drops. Store batteries in cool, dry places at about 30–50% charge to slow down aging and prevent damage. Avoid fully charging or fully discharging batteries during storage to extend their lifespan.

How Long Does A Lithium Ion Battery Last

While every lithium-ion battery will eventually lose capacity, most users can expect several years of service from modern cells. This generally means 500-800 full cycles which ...
