

Lithium battery pack pairing requirements

Overview

When should a lithium battery be connected in series?

You should connect lithium batteries in series when your device requires a higher voltage than a single battery can provide. For example, if your device operates at 7.4V, connecting two 3.7V batteries in series would be appropriate. This setup is commonly used in applications like electric scooters, drones, or other high-voltage devices.

How to connect the lithium battery correctly?

Please check the positive and negative poles and make sure you connect the correct terminals. Then please use the wrench to tighten the screw, battery cable and spring gasket. If you want to use a alligator clip, please clamp it to the copper terminal.

How many batteries can a BMS handle?

Taking Eco-Worthy 12v batteries as an example, our BMS can handle 4 batteries in series at the same time. There are no restrictions on parallel connection, but we recommend to connect up to 4 batteries in parallel to protect the battery and extend the battery lifespan. 2. How to connect the lithium battery correctly?

How do I prepare a lithium battery?

Gather Materials: Prepare 3.7V 100mAh lithium cells, connecting wires, a soldering iron, and safety gear. Identify Terminals: Locate the positive (+) and negative (-) terminals on each battery. Prepare the Batteries: Ensure that all batteries are of the same type and charge level to prevent imbalances.

How do you connect two batteries in a series?

Create Series Pairs: Connect two batteries in series by soldering the positive

terminal of the first battery to the negative terminal of the second battery. Do the same for the other two batteries. Combine Series Pairs in Parallel: Solder the positive terminals of both series pairs together using a wire.

How do you connect two batteries in a battery charger?

Prepare the Batteries: Ensure all batteries are of the same type and charge level. Create Series Pairs: Connect two batteries in series by soldering the positive terminal of the first battery to the negative terminal of the second battery. Do the same for the other two batteries.
