

# Lithuania Civilian Solar Power Generation System

#### **Overview**

In 2024, Lithuania had capacity of 2,567 MW of solar power (compared to only 2.4 MWh power in 2010). As of 2012, Lithuania has 1,580 small (from several kilowatts to 2,500 kW) solar power plants with a total installed capacity of 59.4 MW which produce electricity for the country, and has an uncounted number of private power plants which make electricity only for their owners. OverviewRenewable energy in Lithuania constitutes a growing source of energy in the country. In 2023, renewable energy sources accounted for 76.4% of in the country, up from 18.2% in 2010 and 1.

Solid biofuel or represents the most common source of renewable energy in Lithuania. Most commonly used are and wood as well as agricultural waste. It is primarily used to produce heat, but is also.

• , its main purpose is to provide a spinning reserve of the power system, to regulate the load curve of the power system 24 hours a day. Installed capacity of the pumped storage plant: 900.
