

Luxembourg s grid-side energy storage policy

Overview

What are Luxembourg's Energy Policy Priorities?

Since the 2014 IEA review of Luxembourg's energy policies, the country has made progress on its energy sector priorities of ensuring security of supply, promoting energy efficiency, increasing the use of renewable energy and reducing greenhouse gas (GHG) emissions.

Does Luxembourg need a new electricity infrastructure?

Luxembourg aims to cover over a third of 2030 electricity demand with renewables, mostly through variable renewable energy (VRE) from PV and wind generation. The share of VRE generation in imported electricity is also expected to increase significantly. Taken together, these factors will require substantial investment in electricity infrastructure.

What challenges does Luxembourg face in the energy sector?

The government has adopted ambitious energy sector targets, including a 50-55% reduction of greenhouse gas emissions by 2030. Luxembourg faces challenges achieving those targets. Low energy prices for consumers are creating a barrier to the investments needed in energy efficiency and renewables.

What is Luxembourg's energy system like?

Luxembourg's energy system is characterised by high import dependence and reliance on fossil fuels. In 2018, 95% of its energy supply (100% of oil, natural gas and biofuels and 86% of electricity) were imported. It had the fourth-highest share of fossils fuels in TPES (78%) and the highest share of oil in TPES (60%) among IEA member countries.

Should infrastructure plans and processes support smart grid technology?

Infrastructure plans and processes should also facilitate the deployment of smart grid technologies such as demand-side response, batteries and other

energy storage options.

What can Luxembourg do with smart meter data?

Luxembourg's smart meter deployment and the development of a national database for smart meter data lays the groundwork for time-of-use pricing, a wide range of demand-side response measures and energy services that could support VRE integration, smart EV charging and system flexibility.
