

# Market demand for grid-side energy storage projects

### **Overview**

By application, grid-scale utility projects captured 64% of the energy storage market size in 2024, while EV-charging and transport solutions are expected to grow at a 16.6% CAGR through 2030. What is the demand for grid-scale energy storage?

As renewable energy supply increases around the world, so to is the demand for grid-scale energy storage. It has been projected that the combined global stationary and transportation annual energy storage market will increase from today's baseline of around 600 GWh by a factor of four by 2030 to more than 2,500 GWh.

Can energy storage meet the needs of an evolving grid?

Overall, there is an immense opportunity for energy storage to meet the needs of an evolving grid, and it is well-positioned to do so with the existing tax credits and its declining cost curve.

What is the future of energy storage?

Renewable penetration and state policies supporting energy storage growth Grid-scale storage continues to dominate the US market, with ERCOT and CAISO making up nearly half of all grid-scale installations over the next five years.

Which states are responsible for energy storage?

California, Arizona, and Texas were responsible for 85% of installations. "Energy storage is becoming a mainstay of the power grid, delivering a more resilient and affordable grid," said John Hensley, SVP of Markets and Policy Analysis for ACP.

Why are annual storage installations growing faster than wind and solar?

Annual storage installations are growing faster than wind and solar as the sector races to keep up with the growing need to balance renewables and

support grid resiliency. The storage market is also supported by falling module costs and IRA tax incentives.

Why do data centers need a high-temperature energy storage system?

Thermal storage and compressed-air energy storage (CAES) suit the region's hot climate and vast salt caverns, spurring exportable know-how in high-temperature storage designs. U.S. data centers could draw 6.7-12% of nationwide electricity by 2028, more than double 2023 levels.
