Overview

What is a mobile base station?

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN). The base station connects mobile devices to the network and routes them to other terminals in the network or to the core network of a mobile operator. Read more Explore Mobile base.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

Are mobile communication signals becoming more complex?

In recent years, with the rapid deployment of fifth-generation base stations, mobile communication signals are becoming more and more complex. How to identify a.

How many types of base station configurations can be defined based on 3GPP?

You can define four types of base station configurations according to 3GPP, depending on the conducted or radiated type of the test. Type 1-C refers to the NR base station operating at FR1 with requirements defined at individual antenna connectors.

What are the technical requirements for cellular telecommunications systems?

These technical requirements form a compatibility standard for 800 MHz cellular mobile telecommunications systems and 1.8 to 2.0 GHz Code Division Multiple Access (CDMA) Personal Communications Services (PCS) systems.

They ensure that a mobile station can obtain service in a cellular or PCS system manufactured according to this standard.

Are 5G base stations 3GPP compatible?

In conjunction with 5G NR, private base stations (BS) can support connectivity for different spectrum bands (sub-GHz, 1 to 6 GHz, or mmWave). The 5G base station products must pass all of the test requirements prior to their release. Otherwise, the products are not 3GPP-compatible or appropriate to implement in a network.
