

Mozambique Voda Communications Base Station Inverter

Overview

The Cahora-Bassa transmission project was a joint venture of the two electrical utilities, Electricity Supply Commission (ESCOM, as it was known prior to 1987), latterly, Johannesburg, South Africa and Hidroelectrica de Cahora Bassa (HCB), a firm owned 15% by the government of and 85% by. Equipment was constructed and supplied by ZAMCO, which was a consortium of - JV, Company, and of . Brow.

Why did Mozambique's Songo converter stop working?

The system links Mozambique's Songo converter station to the Apollo inverter station near Johannesburg, South Africa, by a 1414-km (879-mile), 530-kV HVDC overhead transmission line. This system experienced a long-term service interruption from 1985 to 1997 because of the Mozambican Civil War.

Why does Mozambique need a re-connectable converter transformer?

For Mozambique, the energy exports represent an important source of income. ABB replaced the existing equipment with new DC converter transformers, smoothing reactors, arresters and measuring equipment. The installation houses the first re-connectable converter transformers to go into operation worldwide.

Did the Cahora Bassa Dam survive the Mozambican Civil War?

Although it survived the Mozambican Civil War, the Cahora Bassa dam and hydroelectric power plant requires major refurbishment. The Cahora Bassa dam and hydroelectric power plant located on the Zambezi River in northern Mozambique was the last major construction project in Africa during the era of decolonization from Portugal.

What is the Songo converter station project?

The Songo converter station project is an ideal case study for the refurbishment of existing HVDC systems to enable the transmission of renewable energy resources. One of the largest issues with accessing renewable energy is the transmission system and distribution network upgrades required. Aerial view of the dam's associated switchyard equipment.

Is Mozambique a potential energy exporter?

Mozambique has great potential as an energy exporter with around 12 gigawatts (GW) of hydro capacity that could be developed and the Cahora Bassa plant is already one of the largest generation facilities in the South African power pool.
