

Mozambique Wind Power Energy Storage Project

Overview

How much energy will Mozambique generate a year?

The plant will increase Mozambique's installed capacity by 50% and generate 8.6 TWh per year, enough to power more than 3 million homes. A GREEN REVOLUTION: The country is also actively developing other renewable energy segments, such as solar and wind, which together are expected to represent 20% of domestic energy production by 2040.

What is the optimal power system expansion plan for Mozambique?

The optimal power system expansion plan if wind and solar capacity are allowed to triple to reach almost 3 GW by 2032. Currently, the power system of Mozambique is separated into two transmission networks isolated from one another: the Central-Northern and Southern systems. Over 50% of the annual power demand is seen in the Southern system.

Can Mozambique produce 2 GW of solar power by 2030?

Other initiatives are expected to arise to meet the government's goal of having at least 7.5 GW of PV capacity installed by 2030. Alongside wind and solar, Mozambique also has large biomass potential, with estimates pointing to the possible production of 2 GW.

Why is Mozambique focusing on hydropower projects?

Since Mozambique has high hydro power potential, the country is focusing on developing large hydro projects that aim to be operational at the beginning of 2030's. Hydropower projects play an important role in decarbonizing the power sector in Mozambique.

How much electricity does Mozambique have in 2021?

Despite this huge generation potential only 38.6%1) of its population had access to electricity in 2021. The total installed power capacity in Mozambique stood at around 2,800 MW in the year 2021 whereas the peak demand

reported by the state-owned energy utility Electricidade de Moçambique (EDM) was at 1,035 MW.

Will Mozambique build a hydro power plant in 2024?

It also plans for 900 MW of baseload gas projects to be built from 2022 to 2032, including the 450 MW Temane gas power plant expected for delivery in 2024. Since Mozambique has high hydro power potential, the country is focusing on developing large hydro projects that aim to be operational at the beginning of 2030's.
