

Mozambique communication base station wind and solar complementary construction unit

Overview

What is the optimal power system expansion plan for Mozambique?

The optimal power system expansion plan if wind and solar capacity are allowed to triple to reach almost 3 GW by 2032. Currently, the power system of Mozambique is separated into two transmission networks isolated from one another: the Central-Northern and Southern systems. Over 50% of the annual power demand is seen in the Southern system.

How will Mozambique's power plant's strategic location affect the grid?

The project's strategic location will reduce energy transmission losses and improve the security of energy supply in northern Mozambique and stabilize the grid. It is estimated that the power plant's connection to the EDM grid will result in a seven percent improvement in the network default level.

Will Mozambique build a hydro power plant in 2024?

It also plans for 900 MW of baseload gas projects to be built from 2022 to 2032, including the 450 MW Temane gas power plant expected for delivery in 2024. Since Mozambique has high hydro power potential, the country is focusing on developing large hydro projects that aim to be operational at the beginning of 2030's.

Who oversees Mozambique's off-grid projects?

Most of Mozambique's off-grid projects are being overseen by national promoter and developer FUNAE. In March 2024, the institution announced it would invest in 19 new mini-grid construction projects in remote areas to add to its portfolio of generation assets.

How can Mozambique achieve its electrification goal?

A power mix that takes advantage of its vast energy resources in a costeffective way and provides a solid foundation for the long-term development of its power system. The use of proven power generation technologies coupled

with a well-structured and realistic data-driven plan will enable Mozambique to reach its electrification goal.

Why is Mozambique focusing on hydropower projects?

Since Mozambique has high hydro power potential, the country is focusing on developing large hydro projects that aim to be operational at the beginning of 2030's. Hydropower projects play an important role in decarbonizing the power sector in Mozambique.
