

Myanmar Energy Storage Power Station Planning

Overview

What is the energy demand supply situation in Myanmar?

The Myanmar energy demand supply situation indicates that power generation mix must shift to more coal and hydropower, continued use of biomass, natural gas consumption, and appropriate increase of renewable energy such as solar PV and wind power generation.

Why is Myanmar facing a power crisis?

Myanmar's plans to expand its renewable energy sector, focusing on solar and hydropower to boost energy security and support rural development, are being hindered by severe challenges. Since the 2021 military coup, the country has faced an ongoing energy crisis, including electricity shortages, frequent blackouts, and a decline in power generation.

How can Myanmar improve its energy policy?

Expanding renewable energy sources, particularly solar, wind, and hydropower, is crucial for reducing the nation's dependency on gas and mitigating future power shortages. Moreover, Myanmar's energy policy must be reformed to attract foreign investment and improve governance.

How has Myanmar's energy infrastructure changed over the years?

The country's energy infrastructure expanded with foreign direct investment (FDI) support and progressive government policies like the Myanmar Sustainable Development Plan 2018-2030. The total installed power capacity grew from 5,125 MW to 6,830 MW, while power output increased from 15,965 GWh to 23,643 GWh annually.

What is the power resource balance scenario in Myanmar?

As shown in Table 12.2, the Power Resource Balance scenario (Scenario 3) has the lowest installed capacity at 23,594 MW by 2030, with hydro share at 38%, coal 33%, gas 20%, and renewables (solar, wind, etc.) at 8%. MW =

megawatt. Source: Myanmar Energy Master Plan, 2015.

Why is Myanmar's energy sector struggling?

Overall, Myanmar's energy sector faces challenges due to political instability, security risks, and environmental concerns, making its ambitious renewable goals difficult to achieve. Myanmar's National Electrification Plan (NEP) aimed to provide universal electricity access by 2030, with a strong focus on off-grid solutions for remote rural areas.

Myanmar Energy Storage Power Station Planning

Exhibitors will present a wide range of products, including flexible gas turbines, fast ramping gas and diesel engines, hybrid power plant designs, energy storage, and smart grid technology.
