

# National policy on power supply construction for communication base stations

#### **Overview**

How can the electronic industry reduce power requirements for base stations?

As a result, the electronic industry is exploring new methods to reduce the power requirements for the electronic equipment used in the base stations. The first approach is to make the base stations more tolerant to heat which will then require less power for air conditioning.

How much power does a cellular base station use?

This problem exists particularly among the mobile telephony towers in rural areas, that lack quality grid power supply. A cellular base station can use anywhere from 1 to 5 kW power per hour depending upon the number of transceivers attached to the base station, the age of cell towers, and energy needed for air conditioning.

How to design a solar-powered base station?

In order to design and implement a solar-powered base station, PVSYST simulation software has been used in various countries including India, Nigeria, Morocco, and Sweden. This software allows for estimation of the number of PV panels, batteries, inverters, and cost of production of energy considering the geographical and other design parameters.

Why do cellular base stations need maintenance?

Cellular base stations use power without any interruption and also needs maintenance. The increase in demand of power base stations from Indian telecommunication industry is a big challenge, especially in rural India.

What are the requirements for repairing underground communication lines?

C. When repairing underground communication lines that are joint use with damaged electric supply cables, employees shall: 1. Treat all such supply and communication lines as energized to the highest voltage to which they are exposed, or 2. Assure that the supply lines involved are de-energized and

grounded in accordance with Section 44. 430 431C2.

When is a communication system ground connected only to a primary conductor?

Exception 1: Where separation is required by Rule 097A Exception 2: Where the electric supply utility is maintaining isolation between primary and secondary neutrals, the communication system ground shall be connected only to the primary grounding conductor if it complies with the requirements of Rule 097C. 20 Intersystem Bonding (097 & 099)

### National policy on power supply construction for communication ba

### National Electrical Safety Code (NESC) Update

Purpose= The practical safeguarding of persons, utility facilities, and affected property during the installation, operation, and maintenance of electric supply and communications facilities.
