

Nauru power generation container

Overview

How is Nauru moving in the energy sector?

In the energy sector, Nauru is moving along in a process of shifting from what amounted to a system of free electricity to tariffs that recover the real cost of power.

Will Nauru install a solar power plant?

Nauru has embarked on an ambitious project to install a grid-connected solar power plant with a capacity of 6 megawatts (MW) of alternating current. This initiative is part of the Solar Power Development Project, which aims to diversify the energy mix and reduce reliance on diesel.

How does Nauru generate electricity?

Nauru currently relies heavily on imported diesel for power generation, which poses challenges due to fuel price fluctuations and supply interruptions. About 3% of its electricity comes from solar photovoltaic installations. What key renewable energy projects are underway in Nauru?

.

Does Nauru have an energy road map?

Currently Nauru is working on an Energy Road Map, including action plans for the development of renewable energy and energy efficiency sufficient to significantly lower imports of diesel fuel for electricity generation.

What does imported energy mean for Nauru?

Imported energy for Nauru means fossil fuel imports. Unambiguous records of the quantity of fuel imports, their timing and the specific type of fuel imported are vital to the determination of the Nauru energy balance.

Where does Nauru's electricity come from?

Nauru's electricity supply comes from a single power station operated by NUC. Most of the power now comes from four ageing medium-speed Ruston stationary engines with a high-speed Cummins generator providing essential supplementary capacity. There are plans to repair and install two more generators which are already in Nauru but not in use.
