

# New Zealand Park Energy Storage Power Station Project

#### **Overview**

The Ruakākā Energy Park is a co-located battery energy storage system (BESS) and photovoltaic power station in Ruakākā, Northland, New Zealand. The BESS has an output of 100MW and storage of 200MWh. The solar farm is still under construction. When complete, it will have a peak output of 130.

In December 2021, Meridian announced plans for a solar farm and battery energy storage system adjacent to the . The battery system would be next to the.

A solar farm was first proposed at Marsden Point in 2019, when RefiningNZ, owners of the nearby , proposed a small 26MW farm to reduce the refinery's.

The Ruakākā Energy Park is a co-located battery energy storage system (BESS) and photovoltaic power station in Ruakākā, Northland, New Zealand. The BESS has an output of 100MW and storage of 200MWh. The solar farm is still under construction. Where is New Zealand's biggest planned battery energy storage system?

Image: Vector Energy Development approvals have been granted for New Zealand's biggest planned battery energy storage system (BESS) to date. The 100MW battery storage project is in development by electricity generator and retailer Meridian Energy at Ruākākā on New Zealand's North Island. The site is adjacent to Marsden Point, a former oil refinery.

Where is New Zealand's first grid-connected battery energy storage system located?

Meridian Energy has completed construction of New Zealand's first large-scale grid-connected battery energy storage system (BESS) at Ruakākā, with an official opening ceremony scheduled for later today.

How will a battery storage system benefit New Zealand?

The battery storage will help to reduce these events by smoothing the distribution of supply and demand," Knott said. The system will charge with cheap energy during off-peak hours and send it back to the grid at times of high demand. It will also enable more power generated on New Zealand's

South Island to be utilised in the north.

What is New Zealand's first megawatt-scale battery storage system?

The country's first megawatt-scale battery storage system is thought to have been a 1MW/2.3MWh project completed in 2016 using the Tesla Powerpack, Tesla's first iteration of an industrial and grid-scale BESS solution. However the first BESS to be connected to the high-voltage transmission grid in New Zealand came two years after that.

Will a new battery energy storage system help Northland?

The new Battery Energy Storage System should help even out electricity supply and demand peaks and troughs for Northland, Meridian says. From left, project manager Mike Wilson and field service engineer Minh Nguyen with some of the battery modules, on Friday. Photo: RNZ/ Peter de Graaf.

Will New Zealand's first super-sized grid-connected battery improve Northland's energy resilience?

Photo: RNZ/ Peter de Graaf New Zealand's first super-sized grid-connected battery - built at a cost of \$186 million - will help improve Northland's energy resilience in future power outages, Meridian Energy says.
