

Nordic communication operators small base stations

Overview

The use of radio equipment for satellite communication in Norway, for ordinary commercial services, is harmonised with the rest of Europe.

The establishment, operation and use of earth stations on Svalbard and in Antarctica are subject to the regulation concerning satellite.

Nkom supervises earth stations on Svalbard and in Antarctica in accordance with the regulation on satellite earth stations on Svalbard, and in accordance with the regulation on satellite earth stations in Antarctica. It is supervised that the operation of the.

VSAT (Very Small Aperture Terminal) earth stations on ships or aircraft are not subject to the regulations for Svalbard and Antarctica if they: 1. solely communicate with satellites via.

Forms for use in the reporting and submission of information in connection with licences and supervision are available here. This includes.

Small cells are low-powered cellular that have ranges from around 10 meters to a few kilometers. They are base stations with low power consumption and cost. They can provide high data rates by being deployed densely to achieve high spatial spectrum efficiency. In the United States, recent FCC orders have provided size and elevation gui.

What telecommunications companies are in the Nordic region?

The Nordic region is one of the world's most digitized and advanced in telecommunications. It houses large telecom providers such as Nokia and Ericsson, both leading companies in the coverage of 5G and other major telecom infrastructures.

Who supervises earth stations in Svalbard and in Antarctica?

Nkom supervises earth stations on Svalbard and in Antarctica in accordance with the regulation on satellite earth stations on Svalbard, and in accordance with the regulation on satellite earth stations in Antarctica.

Does Norway support satellites?

Norway may not be the first country that comes to mind when thinking of the space industry. But it has quietly supported satellites almost since satellites were invented and has become a ground-station powerhouse. SvalSat, for instance, boasts more antennas than any other commercial station on Earth.

How does a small cell base station communicate with a core network?

The small cell base station communicates with the core network over a highspeed backhaul connection. Core network: The core network manages the overall operation of the small cell network, including authentication, authorization, and routing of user traffic.

How do I establish an earth station on Svalbard?

Establishment of an earth station on Svalbard requires a licence for the establishment, operation and use of the earth station. An earth station must also have communication licences for each satellite to which data is transmitted or from which data is received.

Do earth stations need a communication licence?

An earth station must also have communication licences for each satellite to which data is transmitted or from which data is received. Licences for establishment, operation and use, and for communication with satellites, are granted by Nkom on the basis of assessment in relation to the requirements laid down in the regulations.
