

# Norwegian container wind power base station equipment

### **Overview**

### Can Norway build an offshore wind farm?

As more and more offshore wind farms come under construction, Norway is prepared to lead the way in offshore wind assembly and installation, pioneering new solutions in construction vessels, cables and cable laying, substations and port infrastructure. Constructing an offshore wind farm is like building a factory at sea. The task is monumental.

How do windfarm projects work in Norway?

Traditionally, windfarm projects on Norwegian territory have been constructed in accordance with a combination of FIDIC-based contracts and Norwegian standard contracts. The Norwegian standard contracts include a suite of different standard documents agreed and developed in collaboration by a committee of contractors and builders.

How many wind turbines are there in Norway?

According to figures from NVE (Norway's Water and Electricity Authority), there were 1,392 wind turbines in operation at the start of 2023, spread across 65 windfarms. The wind farms have a standard annual production of 16 923 GWh, which corresponds to 11% of the Norwegian standard annual production.

Does Norway have wind power?

Norway boasts significant potential for wind power generation, particularly within its expansive onshore territories. The country's geographical features, including its windy coastline and vast mountainous regions, offer favorable conditions for wind energy production.

Does Norway have a strong supply chain?

Norway has the R&D and robust supply chain to contribute to the further development of the European grid infrastructure," states Sigurd Urdal, Special

Advisor for offshore wind at Innovation Norway. Cables are a crucial part of well-functioning electrical grids, and here Norwegian cable suppliers are on the industry's cutting edge.

How is Norway positioned to ease development pressures?

According to the North Sea Basin Analysis, Norway is uniquely positioned to ease development pressures thanks to its extensive network of ports and offshore expertise.
