

# Outdoor Energy Storage Vehicle Implementation Standards

### **Overview**

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).

What is energy storage system installation review and approval?

4.0 Energy Storage System Installation Review and Approval The purpose of this chapter is to provide a high-level overview of what is involved in documenting or validating the safety of an ESS as installed in, on, or adjacent to buildings or facilities.

What is the goal of the EV standards roadmap?

The hope is that this roadmap will be broadly adopted by the user community and that it will facilitate a more coherent and coordinated approach to the future development of standards for EVs. It is envisioned that the roadmap be widely promoted and that some mechanism be established to assess progress on its implementation. Chapter 2.

What is a stationary energy storage system (ESS)?

This standard applies to the design, construction, installation, commissioning, operation, maintenance, and decommissioning of stationary energy storage systems (ESS), including mobile and portable ESS installed in a stationary situation and the storage of lithium metal or lithium-ion batteries.

What is the energy storage safety strategic plan?

Under the Energy Storage Safety Strategic Plan, developed with the support of the Department of Energy's Office of Electricity Delivery and Energy Reliability Energy Storage Program by Pacific Northwest Laboratory and Sandia National Laboratories, an Energy Storage Safety initiative has been underway since July

What is the maximum ambient temperature for electric vehicle supply equipment?

Product standards such as UL 2594 (Ed. 3), Electric Vehicle Supply Equipment, generally anticipate maximum ambient temperatures of 40C, although higher limits may be declared by manufacturers and validated in the testing. This is consistent with widespread use of a 40C default ambient threshold for industrial and similar equipment.
