

Outdoor power supply completely discharged

Overview

How to safely discharge a power supply unit?

When we say that we are discharging the power supply unit, we are actually discharging the residual charges from the capacitors. Generally, Switched Mode Power Supply Unit (SMPS) is widely used in the PC. There are three methods to safely discharge the capacitors of the PSU. Turn off all the power supply to the PC from the mains.

What is an outdoor Uninterruptible Power Supply?

An outdoor Uninterruptible Power Supply is a power solution designed for critical applications where it's essential that equipment stays running in harsh outdoor environments and significant temperature variations, where an ordinary UPS would fail. Trust TSi Power for these applications.

How do I know if my PC power supply is drained?

Many times you can see power LEDs or other signals that a PC power supply has not completely drained. You can always wait 1 min after powering off and unplugging to begin working. That provides time for the power supply capacitors to discharge. Many times you can see power LEDs or other signals that a PC power supply has not completely drained.

Outdoor power supply completely discharged

Outdoor power supply FAQ: How to discharge the outdoor power supply

Use professional discharge instruments to control the discharge of outdoor power supplies. This is a more scientific and efficient method, but there are also some requirements.
