

Pakistan wind power storage

Overview

Pakistan's wind power capacity is approximately 1,845 MW as of 2025, generated from around 36 operational wind projects. The Gharo-Jhimpir wind corridor in Sindh province is the heart of wind power generation, contributing over 70% of the country's wind energy capacity. What is wind power in Pakistan?

Wind power is a form of renewable energy in Pakistan which makes up more than 6% of the total electricity production in the country. As of 2018, wind power capacity in Pakistan was 1,287 MW. The government is looking to increase the share of renewable energy and plans to add around 3.5 GW of wind energy capacity by 2018.

Which is the best wind energy site in Pakistan?

Major Suitable Sites for Wind Energy in Pakistan The Gharo-Keti Bandar Wind Corridor is by far the most significant and well-explored wind energy site in Pakistan. Situated along the coastal areas of Thatta and Jamshoro districts in Sindh, this corridor extends for over 60 kilometers and covers an area of 9,700 square kilometers.

Why should Pakistan invest in wind energy?

With continued investment, supportive government policies, and improved infrastructure, wind energy can play a crucial role in meeting Pakistan's growing energy needs while reducing its carbon footprint and dependence on non-renewable resources.

Should solar and wind power be allowed in Pakistan?

Around 3 years ago the general view in the Pakistan electricity sector was that solar and wind power (together termed "variable renewable energy," or VRE) should not be allowed to go above 5% of Pakistan's installed capacity.

What are the challenges to wind energy development in Pakistan?

Challenges to Wind Energy Development Despite the promising potential, several challenges remain in the development of wind energy in Pakistan: Grid Infrastructure: Many of the most promising wind energy sites are located in remote areas with limited access to the national grid.

Does Pakistan have a good wind resource?

Of course Pakistanis already know this due to the long, hot summers, which until recently were accompanied by regular power cuts due to insufficient supply. Pakistan also has some excellent wind resource potential in the south and west of the country, as highlighted by the Global Wind Atlas.
