

# **Photovoltaic DC to AC inverter**

## **Overview**

To calculate DC watts into AC watts multiply the DC watts by the inverter efficiency rate and divide the result by 100. For example, most inverters are 90% efficient. So, (100 DC watts  $\times$  90)  $\div$  100 = 90 AC watts. With the help of this simple calculation formula, you can easily calculate the DC watts of your battery.

Note: 1000Wh = 1kWh and most inverters are about 90% efficient. But to check the exact value, have a look at the specs of your inverter.

Direct current (DC) is the form of power produced by the solar panels and also batteries are designed to store DC current (12v, 24v, 48v). But.

Here's a chart of DC watts into AC watts conversion with a pure sine wave inverter and modified sine wave inverter. Note: the above table is based.

When converting DC watts into AC watts there will be a conversion loss of 5-15% because of the inverter efficiency rate. Internal temperature.
