

# Photovoltaic energy storage battery cost per kilowatt-hour

#### **Overview**

While solar batteries come in many shapes, sizes, and chemistries, a handful have emerged as the best batteries of 2023and the most sought-after by homeowners. The chart below lists the average retail price, estimated project cost after claiming the 30% tax credit, and cost per kWh of popular solar batteries.

The average cost of a fully installed standalone 12.5 kWh solar battery is \$18,791 (or \$13,154 after claiming the 30% tax credit), according to the latest datafrom the National.

Solar battery prices are on a similar trajectory as 4K TVs. However, there are far more factors that influence the cost of a battery project than there are for installing a TV. Beyond the.

There are a handful of factors that influence the price of solar batteries, but perhaps the greatest reason they are expensive is simply because residentialscale batteries are a.

Whether solar battery is worth the cost in 2023 is totally up to you and your energy goals. If you experience frequent or long-lasting power outages, then having battery storage for backup.

Battery systems can range from 5 to 40 kWh, depending on your energy needs. Battery prices also vary by brand, capabilities, and installation factors. We'll explore these factors later. On average, it costs around \$1,300 per kWh to install a battery before incentives. How much does a solar battery cost?

A fully-installed 13.5 kWh solar battery costs \$13,500 on average, after claiming the 30% tax credit. This price can vary from project to project as there are many factors that influence battery storage costs. Update: The homeowner-claimed tax credit for home battery storage is only available until the end of 2025.

How much does a battery cost per kWh?

Battery cost per kWh has become a cornerstone metric in the global shift toward electrification and renewable energy. From a staggering \$1,200 per

kWh in 2010 to an average of around \$120 per kWh in 2025, this decline reflects tremendous technological progress, increased manufacturing scale, and market demand.

How much does a battery cost on EnergySage?

On EnergySage, Pytes USA Energy offers some of the most affordable batteries at about \$651/kWh. You'll typically pay the most for Enphase batteries, which cost about \$1,510/kWh. \*The average price per kWh of the 10 most quoted batteries on EnergySage in the first half of 2025 (excluding Panasonic, which is closing its solar and storage business).

How much does a battery system cost?

Battery systems can range from 5 to 40 kWh, depending on your energy needs. Battery prices also vary by brand, capabilities, and installation factors. We'll explore these factors later. On average, it costs around \$1,300 per kWh to install a battery before incentives. With the 30% federal tax credit applied, the cost is closer to \$1,000 per kWh.

How much does battery storage cost?

The largest component of utility-scale battery storage costs lies in the battery cells themselves, typically accounting for 30-40% of total system costs. In the European market, lithium-ion batteries currently range from €200 to €300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves.

How many kWh batteries do you need for a solar system?

For instance, there are 5 kWh batteries used mostly for improving the economics of solar, and there are 40 kWh battery systems that can back up your entire home during a power outage. While larger systems come with a higher price tag, you'll likely pay less per kilowatt-hour of storage.
