

# Photovoltaic power generation control in wind turbine room of communication base station

### **Overview**

Can a hybrid solar and wind power system provide reliable electric power?

This paper presents the solution to utilizing a hybrid of photovoltaic (PV) solar and wind power system with a backup battery bank to provide feasibility and reliable electric power for a specific remote mobile base station located at west arise, Oromia.

What is the difference between a PV panel and a wind turbine?

type voltage as backup, whereas the PV panels a nd wind turbine output is DC type. The converter is affect nature of the renewable s ources. Hybrid model of these three energy sources in parallel with uninterrupted power supply. Figur e 5 presents the schematic representation of HOMER simulation model considered. Figure 5.

Can solar and wind provide reliable power supply in remote areas?

Solar and wind are available freely a nd thus appears to be a promising technology to provide reliable power supply in the remote areas and telecom industry of Ethiopia. The project aim generate and provide cost effective electric power to meet the BTS electric load requirement.

Can a hybrid system be used to supply electricity to telecom towers?

. A hybrid system consisting of Photovoltaic modules and wind energy-based generators may be used to produce electricity for meeting power requirements of telecom towers (Acharya & Animesh, 2013; Yeshalem & Khan, 2017). A schematic of a PV-wind-batterybased hybrid system for electricity supply to telecom tower is shown in Fig. 17. .

How much electricity does a PV/wind/battery hybrid system produce?

Monthly average electricity pro duction of PV/Battery hybrid system. 5.1.2. PV/Wind/Battery configuration are DC. The result is based upon the system w ith 41.4 kWh/day telecom load at 5.83 kWh/m solar radiation, 3.687m/s of

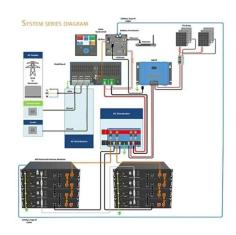

wind speed and \$0.8/L diesel price.

What parameters are important in the study of photovoltaic modules?

Another important parameter in the study of photovoltaic modules is the temperature response with respect to the change in incident radiation, which is considered dynamic and cannot be analyzed in detail in a stationary model.
