

Photovoltaic power generation project component prices

Overview

How much does a PV module cost?

The November 2021 technical report considers a PV module cost of \$0.34 per watt, which is equivalent to: As the size of a solar array increases, photovoltaic modules represent a higher percentage of total costs, while the percentage of soft costs decreases.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

How many inverters does a PV system use?

The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.
