

# Photovoltaic power inverter equipment

#### **Overview**

A solar inverter or photovoltaic (PV) inverter is a type of which converts the variable (DC) output of a into a (AC) that can be fed into a commercial electrical or used by a local, electrical network. It is a critical (BOS)-component in a , allowing the use of ordinar.

Solar inverters are power electronic devices whose core function is to convert the DC power generated by solar panels into standard AC power. This process not only ensures the availability of electrical energy, but also achieves compatibility with existing power grids or stand-alone load systems.
