

# Portable Energy Storage Power Communication BESS Solution

#### **Overview**

#### What is a Bess system?

At the heart of WEG's BESS solution is an advanced energy control and management solution. This sophisticated system coordinates different operation modes, optimizing the overall performance of the energy storage production.

Why should you choose a Bess energy storage system?

The mobility and flexibility of the system enables novel applications and deployments where BESS previously were unused due to the non-flexible solutions. The system is modular, meaning that the energy storage capacity can be quickly adapted depending on the application case, in contrast to larger and bulkier solutions.

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

What is a Bess solution?

WEG's world class BESS solutions are capable of either co-location with variable renewable sources (PV or Wind) to reduce intermittency in supply, as well as stand-alone applications to address a host of reliability and stability issues on the grid.

Is a Bess a load or generator?

Since the BESS is, as seen from the power system, able to act as both a load or generator, i.e. consume or inject active and reactive power individually, these capabilities are described respectively in the LNs DLOD and DGEN.

#### Why do we need a Bess?

The faster response times and flexible service capability of the BESS enables the introduction of variable renewable energy sources, along with replacing the needs for traditionally fossil fuel-powered temporary applications.
